

Gorzalanny, Tom										Health	D	LIMA Plan	B+	Skills-wise, this was his best year in majors, fueled by jump in Dom. Lucky H%/S% combo led to low 1H ERA, but the baseball gods reversed that in 2H. The nutshell is .776 OPS as starter, .574 as reliever and 9 HR at home, 2 on the road. It is really hard to milk a middle reliever's road games for fanalytic value.

Gray, Sonny										Health	A	LIMA Plan	C+	5-3, 2.67 ERA in 64 IP at OAK. MLEs didn't suggest this level of performance, but who's quibbling? 2H skills were strong across the board, where BPV says he was a star, if not yet an All-Star. He's young, he's good, and his ERA was fully supported by xERA. Strikeout/ground ball combo a real plus. UP: 3.00 ERA.

Gregerson, Luke										Health	B	LIMA Plan	B+	His skills are precisely what one wants in a pitcher: combines ground balls with strikeouts without walking lots of guys or yielding homers. SD didn't trust him to close after 2011 and signed Huston Street. While he rebounded, he's not the dominant force of his youth. Perpetual closer-in-waiting. Given a chance... UP: 35 Sv.

Gregg, Kevin										Health	A	LIMA Plan	C	1H ERA came from 5-year high in Dom, which not only couldn't repeat, but cratered like the Grand Canyon in 2H. BPV splits were freakish, but his corpus of work for the year was par for the course for a Cubs closer: lots of saves and lots of ninth inning excitement. And pain. Will be sold off into middle relief for a bag of chips.

Greinke, Zack										Health	D	LIMA Plan	C	Here's the theory: if you are a matador, it is best to come with the red cape and dodge the bull lest you get gored or wind up with a broken collarbone. xERA and Dom say that he is a star, not a superstar. 2H ERA was awesome, fueled by abnormally good H%/S% combination which won't repeat. Split 2012/2013 difference.
